Forensic Photography (Digital Imaging)

The Digital Imaging Internship Program is designed to provide pre-baccalaureate and post-baccalaureate students hands-on and technical exposure to forensic photography and imaging practices within a medical examiner system. Under the direct supervision of OCME Photography staff, the intern will assist in completing digital photography of case examinations, participate in digital media archiving, maintain supply inventory, and complete administrative tasks. The intern may also assist in completing event photography. The intern will interact with medical professionals and law enforcement agents. The intern is required to complete a small research project on a topic related to forensic photography and present the findings in a PowerPoint presentation to OCME staff at the end of the program. The internship program is available for fall, spring, or summer semesters with flexible start and end dates. The intern is expected to be available for 20-40 hours per week during the internship and report to OCME at 8:00 AM Monday thru Friday. The intern will be subject to long periods of standing. Students currently enrolled in an associates, undergraduate, or graduate program in photography, forensic science, or related field are eligible to apply.
